

Semantics of Photographs

- Images go through several stages of reproduction: negatives, print, fascimile, scan
- Is it a new images or a new representation?
- At which stage is the metadata description attached to? (layers of representations)

foaf:Image - “subject image”

lio:fascimile

- informally referred to as “sameImageAs”

lio:depicts

- what is in the image?

- indicates “subject terms” - people, places, events, iconography, function/purpose

- use subproperties to restrict ranges.

*Not all fascimiles are “Work”; some may be composed of several “Works”; an Image may be a “Work” in itself.
